THE EARLY ISC

When we scheduled *Module Y2* and announced plans to build much of it around the "Early ISC", players asked what we would do about miniatures. Rather than sculpting and casting 25 entirely new ships (with limited sales potential) we made a deal with Iron Crown Miniatures to design the early ISC starships around existing miniatures from their *Silent Death* line. Rather than marketing these ourselves, we are simply referring customers to their range of starships. The deal worked so well that we decided to use more Iron Crown ships for the original Earth ships, also in *Module Y2*. Here is a list of the early ISC ships and the equivalent Iron Crown miniatures.
