

**(R61.24) B-29 HEAVY BOMBER:** The B-29 was the heavy cruiser of the Eighth Air Force Simulation carrying eight of photon torpedoes and a baker's dozen of phaser-1s, almost all of which were in 360° mounts. It suffered from the poor turning characteristics of its class, but was more durable in both its shielding and internal volume. A flight of these spelled the doom of more than one base in simulator exercises. A squadron of nine would make even a Starbase Command Crew blanche during a training exercise.
