

**(R0.0E) INTERIM CARRIER ESCORT CHART**

This chart was requested by those trying to use the Master Rulebook and separate SSD books until the pending release of the Master Ship Book. No effort has been made to clean up the format.

**(R0.7) CARRIER DATA CHART**

All carriers are provided with a Carrier Data Chart, which is generally in this form:

YEAR	ESCORTS	FIGHTERS
Y170-72	CL, EFF	12xAAS
Y173-74	MEC, EFF	12xHAAS
Y173-74	MEC, DWE	12xHAAS

The year column indicates the time when this combination of escorts and fighters was in use. The escort column lists the ships which almost always appear with the carrier. The fighter column defines the fighter group. EW fighters are not noted here; they have their own rules. Generally, one of the 12 fighters is in fact an EW fighter. C-refit fighters (R1.F8) are not listed as their deployment was not universal; see the rule in Module J.

A carrier cannot be purchased without buying its escorts, and the escorts cannot be purchased alone (excepting a very few standard warships, such as the Kzinti CL, which served as carrier escorts during the earliest carrier deployments). A player can always select an earlier type of escorts or fighters and can replace the larger escorts with smaller ones from the same or an earlier period.

FFE/FFAs were used to fill in when the supply of new DEs was exhausted and the supply of NACs was insufficient to completely

replace them. DWAs replaced FFAs and DEAs when they became available. See Module R2 for the DW and its variants.

F-14Bs entered service earlier on the Klingon front (R2.F1).

## (R3.0) THE KLINGON EMPIRE

### (R3.16) CARRIER-TUG (CVT):

Fighter groups varied widely, but the most common was one flight (five fighters) of Z-2 (or Z-V or Z-Y) superiority fighters and one flight of assault fighters (Z-1 or Z-D); after a few years most CVTs carried only superiority fighters. The CVT can guide seeking weapons equal to double its sensor rating.

Year	Escorts	Fighters
Y168-72	2xE3E	5xZ-1, 5xZ-2
Y168-75	2xE4E	5xZ-1, 5xZ-2
Y169-75	2xE4E	10xZ-2
Y175-80	2xE4A	10xZ-V
Y179+	AF5, E4A	10xZ-Y

During Y168-75, some CVTs replaced their Z-1s with Z-2s. During later years, some replaced half of their superiority fighters with Z-Ps, but this was rare. Fighters with C-refits could be operated in later years, but any CVTs still in service during that time period would be far down the priority list to receive them.

### (R3.21) D6V CARRIER:

There are two bays, each with five fighters, one admin shuttle, and one launch hatch. (MRS shuttles were rare in this class; no more than one would be carried.) There is an elevator (J1.59) to move fighters between the two bays. There is no balcony.

Fighter groups varied widely, but the most common was one flight (five fighters) of Z-2 (or Z-V or Z-Y) superiority fighters and one flight of Z-1 or Z-D/P assault fighters. Later, many D6Vs carried pure superiority fighter groups. Fighters with C-refits could be operated, but D6Vs would be far down the priority list.

Year	Escorts	Fighters†
Y167-70	2xE3E	5xZ-1, 5xZ-2
Y168-75	2xE4E	10xZ-2
Y175-80	2xE4A	10xZ-V
Y179+	AF5, E4A	10xZ-Y

† Some continued to have five assault fighters after the dates shown here.

### (R3.28) C8V HEAVY CARRIER:

The C8V carried a total of 24 fighters and 7 admin shuttles in two shuttle bays and the special small bay on the boom. Two admin shuttles were usually replaced with MRS, not included in BPV. The two main bays were stacked one on top of the other with armored bulkheads in between, changing the outline of the ship substantially. Transfers by (J1.59) are possible between the two rear bays using the elevators (R3.R6). There is a four-position balcony for the lower shuttle bay. The upper bay has launch tubes.

Year	Escorts	Fighters†
Y174	D5E, F5E, E4E	12xZ-V, 12xZ-D/P
Y175-76	AD5, AF5, E4A	12xZ-V, 12xZ-D/P
Y177-80	AD5, 2xAF5	18xZ-Y, 6xZ-P
Y180-84	AD5, 2xAF5	18xZ-YB, 6xZ-P
Y183+	AD5, 2xAF5	24xZ-YC

† There were usually 6 Z-Ds and 6 Z-Ps. Sometimes Z-Ps or superiority fighters replaced some of the Z-Ds, but there were never more than 6 Z-Ds on any C8V. All of these assault fighters are in the lower bay.

Players could use two AD5s and one E4A as an alternative. The single AD6 (R3.76) replaced the AD5 in the *Vindicator* group.

Balcony: Four position, lower bay only.

### (R3.30) F5V LIGHT CARRIER

Year	Escorts	Fighters
Y167-70	E3E	8xZ-2
Y168-75	E4E	8xZ-2
Y175-80	E4A	8xZ-V
Y177-88	AF5	8xZ-Y
Y186-	AF5	8xZ-YB or C

### (R3.44) D7V STRIKE CARRIER:

There are six fighters in the upper bay and six in the lower. There are bay elevators (R3.R6). There is a 4-place balcony adjacent to the lower bay. Like most strike carriers, it usually had an MRS, but this is not in the BPV. See (R3.F4) for availability of Z-Y variants.

Year	Escorts	Fighters
Y172-74	2xE4E	12xZ-2
Y172-74	F5E, E4E or F5E	12xZ-V
Y173-74	D5E, F5E	12xZ-V
Y175-77	AD5, AF5	12xZ-V
Y177-84	AD5, AF5	12xZ-Y
Y183+	AD5, AF5	12xZ-YC

The DSF originally assigned E4E escorts to D7Vs for operational reasons (even when D5Vs had D5Es).

**(R3.62) D5V LIGHT CARRIER:**

The ship had all 12 fighters in one large bay, rather than the double-stacked bays of most Klingon carriers. The lack of APRs allowed launch tubes to be used from the forward end of the bay, which almost made up for the lack of a balcony.

Year	Escorts	Fighters
Y170-71	F5E, E4E	12xZ-2
Y170-73	D5E, F5E	12xZ-2
Y173-74	D5E, F5E	12xZ-V
Y175-80	AD5, AF5	12xZ-V
Y178-86	AD5, AF5	12xZ-Y
Y183+	AD5, AF5	12xZ-YC

**(R3.70) C8S SPACE CONTROL SHIP:**

The 18 shuttle boxes are in two bays of nine, each with six fighter, two admin, and one MRS. Transfers between these bays are possible using (R3.R6). Each bay has a standard hatch opening to the rear (no balcony). The small forward bay has the 19th shuttle box and cannot transfer shuttles.

Year	Escorts	Fighters
Y179+	AD5, 2xAF5	12xZ-Y
Y181+	AD5, 2xAF5	12xZ-YB
Y186+	2xAD5, AF5	12xZ-YC

**(R3.80) E4V ESCORT CARRIER:** Used exclusively by the ISF (note the range-10 disruptors), primarily for convoy protection, but occasionally assigned to provide support to a DSF squadron or to deliver backup fighters for a fleet carrier. After Y178, the two surviving E4Vs received Z-V fighters.

All six fighters are in a single bay with a standard hatch. There is no balcony; there are no launch tubes.

Year	Escort	Fighters
Y169-75	E4E	6xZ-2
Y175-77	E4A (sometimes E4E)	6xZ-2
Y178+	E4A	6xZ-V

**(R3.82) B11 SUPER BATTLESHIP:**

Year	Escorts	Fighters
Y178+	None	8 x Z-Y

Two shuttle bays (boom, rear); no transfers. Rear bay has a four-space balcony.

UIM: There are three UIM modules as standard equipment. Backups are available for purchase under (S3.2).

**(R3.83) B10V SUPER CARRIER**

There are three shuttle bays in the rear hull. The upper left bay holds nine Z-Y fighters, one of which is an EWF. The bay has three launch tubes and a three-position balcony. The upper right bay is identical to the upper left. The lower bay holds six Z-D (sometimes Z-P) fighters, two administrative shuttles, and two MRS shuttles (not in BPV); it has a four-position balcony but no launch tubes. Internal transfers by (J1.59) are possible between all three rear bays; the upper and lower bays are connected by elevators (R3.R6).

Year	Escorts	Fighters
Y184+	AD5, 2xAF5	18 x Z-Y, 6 x Z-D

The *Insatiable* was completed as a space control ship, entering service in Y186. There are two shuttle bays in the rear hull, each of which holds six Z-Y fighters, one admin shuttle, and one MRS (not in BPV). Each bay has three launch tubes and a three-position balcony. There is 1 EWF among the 12 Z-Ys; it can be serviced in either bay.

Year	Escorts	Fighters
Y186+	AD5, 2 x AF5	12 x Z-Y

**(R3.85) SPACE CONTROL POD (P-S10):**

The fighters are in two separate bays, each with a single door and no balcony. Transfers are not possible.

When a tug carries this pod, it operates with the escort group given below.

Year	Escorts	Fighters
Y181+	AD5, AF5	12 x Z-YB

The SSD shows the version with superiority fighters. Some had torpedo fighters. No WarHawk had a mixed group.

**(R4.15) SPARROWHAWK-B CARRIER (SPB):**

Carrying 16 Gladiator fighters, the SPB rapidly replaced the aging WarHawks and provided new flexibility for fighter squadrons. Each module includes four stasis boxes for type-F plasma torpedoes (to be loaded on the fighters). Each module carries four torpedo and four superiority fighters; no transfers. See rule (J4.86).

Y183+	BHE, 2xSNE	10xG-FSF-D 10xG-III-K

There are two doors to the ship's shuttle bay, each of them large enough to launch or land one shuttle per impulse like the Federation CVA rear hatch (R2.13), making it a unique bay (J1.57). Note that the escorts for this ship were at first ceremonial, and were not always present when it was at Romulus. After Y174 the escorts were more formal, but sometimes the ship had two BHEs rather than one BHE, and for at least a brief period after Y180 it operated with three SNEs as its escorts. There were, however, rare periods when other, and better, escorts operated with the ship when there was no better carrier available to assign them to, but this was rarely for more than a few months, often only a few weeks.

### (R5.6) CARRIER (CV)

### (R5.11) SPACE CONTROL SHIP (SCS):

The 12 fighters are in a single bay with four launch tubes and a single belly hatch for recovery of returning fighters. This allows it to simultaneously launch four and recover one fighter (or to launch five, or to launch four while dropping a T-bomb, etc.). The SCS was authorized two MRS shuttles but did not always have them. The 18 deck crews include the 6 for the MRNs.

**(R5.14) HANGAR POD (P-V2)  
(R5.14A) CARRIER TUG (CVT):**

A CVT might operate alone, or it might be given the same escorts as a CVL or CVS. It would have the same fighters as a CVS if operating as a fighter transport or carrier replacement, but might have older fighters if operating as a convoy escort.

Transfers (J1.59) between the bays on the pods and tug are not possible.

**(R5.24) SUPER SPACE CONTROL SHIP (SSCS):**

The 12 fighters are in a single bay with four launch tubes and a single belly hatch for recovery of returning fighters. Y170-74	DE, 2xEH	13xSt2, 2xStH
Y175+	DA, 2xAH	13xSt2, 2xStH

There are two shuttle bays. Transfers between the two bays on the pallet (J1.59) are possible, but not between the pallet and the tug. Escorts had Stinger-1 through Y169; Stinger-2 thereafter.

**(R9.33) TROOPER NEW LIGHT CARRIER (NVL):**

There are two shuttle bays; transfers are possible by (J1.59). Each bay has three launch tubes. Note that, for all carrier data tables, the fighters listed are those on the carrier only and do not include any fighters on the escorts.

Year	Escorts	Fighters
Y173-75	NEC, EH	10xSt2, 2xStH
Y175+	NAC, AH	10xSt2, 2xStH

**(R9.42) IRON DUKE HEAVY CARRIER (ID):**

The ship had two large shuttle bays, each holding 12 fighters, 2 administrative shuttles, and an MRS (if using the optional rules, not in BPV). Each bay has six launch tubes and the standard launch/recovery hatch.

Year	Escorts	Fighters
Y173-74	DE, 2xEH	18xSt2, 6xStH
Y175-76	DA or NAC, 2xAH	18xSt2, 6xStH

Year	Escorts	Fighters
Y175+ StH	None	14 x St2, 4 x StH

**(R9.56) OVERSEER HEAVY CARRIER (OS):**

There are two squadrons, each with nine fighters. There are three bays. Transfers between the two front bays are possible, but it is impossible to transfer fighters to or from the rear bay without flying them outside of the ship.

In keeping with other BCVs, this ship is designated as a "true carrier" and is assigned an escort group.

Year	Escorts	Fighters

**(R9.76) VAMPIRE HUNTER MOBILE CARRIER (DWV):**

Vampire Hunters always carried Stinger-2s and Stinger-Hs. A single escort, either an AH or DWA as available, was assigned to protect it.

YEAR	ESCORTS	FIGHTERS
Y176+	AH or DWA	7xSt-2, 2xSt-H

**(R9.84) IRON CHANCELLOR HEAVY CARRIER (IC):**

The 40 fighters are organized into three squadrons of 12; the other 4 are considered hybrid fighters for carrier local defense and do not create an exception to the "three squadron limit" (S8.321). It should be noted that the design of the hull simply did not allow more launch tubes and it took the ship a considerable time to get all of its fighters into the battle. The bay has two "wide" doors (R2.13), one on each side. The ship normally carried two MRS shuttles but on one occasion carried four (the reason for this is not known). See (J8.512).

Year	Escorts	Fighters
Y171	NEC, 2xEH	27xSt2, 10xStH, 3xStE
Y175	NAC, 2xDWA	27xSt2, 10xStH, 3xStE

**(R9.85) MONARCH-V HEAVY CARRIER (MNV):**
